ANNUAL FIRE REPORT
for the
NATIONAL FORESTS

Calendar Year 1966

STATION LIBRARY COPY

U.S. DEPARTMENT OF AGRICULTURE - Forest Service

THE ANNUAL FIRE REPORT FOR THE NATIONAL FORESTS IS A COMPILATION OF FOREST FIRE STATISTICS FOR FIRES OCCURRING ON NATIONAL FOREST LAND AND OTHER LANDS PROTECTED BY THE FOREST SERVICE.

CONTENTS

Table 1. NUMBER OF FIRES BY GENERAL CAUSES
- National Forest land
- Total All Land
- Other Than National Forest Land

Table 2. AREA BURNED BY GENERAL CAUSES
- National Forest Land
- Total N.F. and Other Land Inside Protection Boundaries

Table 3. AREA BURNED AND DAMAGE
- National Forest Land
- Other Land Inside Protection Boundaries
- Total N.F. and Other Land Inside Protection Boundaries

Table 4. DAMAGE BY MAJOR CAUSES

Table 5. NUMBER OF FIRES BY MAJOR CAUSES AND SIZE CLASSES

Specialized interregional suppression crews such as this are quickly moved by air to assist local forces on large fires.

THE 1966 FOREST FIRE REPORT

The stage was set in 1966 for what could have been the most disastrous fire season in more than 30 years in the National Forests. Continued hot, dry weather in many areas caused severe burning conditions to build up earlier, persist longer, and reach more critical levels than have been experienced in recent times. Coupled with these explosive conditions was the heavy use which the National Forests are receiving - use which greatly raises the risk of fires starting. Fire control forces met the challenge well. The value of modern training methods, fire control techniques and equipment was fully proven as losses were held below those of many less critical years. The expanded use of aircraft, the development of small mechanized line-building equipment, and the use of infrared scanning to locate and map fires through the smoke were vital in keeping fire losses down. The establishment of strategically placed mobile suppression crews and similar developments also have contributed to the effectiveness of the modern-day Forest Service fire control organization.

Fire Weather

Both the eastern forests and many areas of the west, where below normal snowpacks prevailed, felt the effects of a warm, dry spring. By early summer, burning conditions on many western forests were already reaching near-critical levels. These persisted with little relief into the fall. Spring and summer precipitation over a wide area of the West was less than 50 percent of normal. For some localities, the period was the driest of record.

Fire Occurrence and Area Burned

Below normal lightning occurrence in the West helped to keep the total number of fires to less than the previous 5-year average. Man-caused fires, however, rose to the second highest number in the last 12 years. Prevention efforts were intensified during the fire season. Thus the increase in number of fires is most likely the result of the abnormally long period of high fire danger, the rise in the number of visitors, and the expansion of resource activity, rather than increased carelessness.

The acreage burned during the year was almost two and one-half times the 1961-65 average. While this represents a significant loss, it is not large in comparison to what could have occurred. Losses, for example, were held well below the 424,000 acres burned during the severe, but overall less critical 1960 fire season. An example of improved methods are the specialized mobile interregional suppression crews which now provide strong reinforcement for local forces on large fires. These nine strategically located 25-man crews are quickly moved by air when a fire exceeds local capabilities. Much use is also made of trained Indian and Job Corps firefighting crews. Infrared mapping of fire proved very valuable. An airplane mounted unit uses an infrared scanner for accurate location and mapping of fire perimeter and areas of intense burning. It can "see" the fire even when smoke cover or darkness make normal reconnaissance impossible.

The following shows total fires by major causes, and area burned, for all National Forests and Grasslands.

Calendar Year	Number of Fires Lightning:	Man-Caused:	Total	Acres Burned
1961	10,576	4,583	15,159	224,394
1962	6,301	5,193	11,494	83,457
1963	6,471	6,269	12,740	127,571
1964	4,617	5,132	9,749	183,154
1965	5,243	4,123	9,366	75,765
Average 1961-65	6,642	5,060	11,702	138,868
1966	5,858	5,387	11,245	332,921

Major Fires

The critically dry fuel conditions caused many fires to spread rapidly in spite of prompt detection and attack; 110 reached Class E (more than 300 acres) size, and required major efforts to bring them under control. The previous 5-year average number for such fires is 63. The largest fire of the year was the Wellman Fire on the Los Padres National Forest in California. Started by an airplane crash in remote and rugged terrain during extreme fire danger, it burned 93,600 acres before it was controlled. Six other major fires in the West burned between 10,000 and 20,000 acres each in National Forest protection areas.

Fatalities

Fourteen men died in firefighting operations in 1966. A pilot and observer lost their lives in a plane crash in Idaho, and 12 firefighters died as a result of burns during the Loop Fire in California when they were trapped

by an unexpected, sudden run of the fire. These tragedies have spurred more vigorous efforts to examine firefighting methods, training, and capabilities to insure safe, as well as effective fire suppression.

Aerial Operations

Aircraft were used extensively in fire control work during 1966 and contributed greatly to holding down losses. Airplane patrols are now used to supplement ground lookout stations in most areas. The patrols result in significant cost savings over a completely ground lookout network. Aerial attack on fires took many forms: Air tankers dropped 5.9 million gallons of chemical fire retardants on 1,746 fires; smokejumpers were used in controlling 614; helicopters rapidly transported attack crews to more than 1,400 fires.

Fixed wing aircraft flew 42,894 hours on fire control missions, and helicopters 13,459. The total use of 56,271 hours is an increase of 43% over the average time flown on fire activities during the previous five years.
